CAREER OBJECTIVE

Third-year Information Technology student who builds complete, working systems end-to-end — from responsive frontend interfaces to Flask REST APIs backed by real databases and JWT authentication. Seeking a Frontend Developer or Full-Stack internship to contribute production-quality code and grow fast alongside an engineering team.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java

Frontend: HTML, CSS, JavaScript (ES6+), DOM Manipulation, Fetch API

Backend: Flask (Python), REST API Design, JWT Authentication, MVC Architecture

Database: SQLite, SQL (CRUD Operations, Schema Design)

Tools: Git, GitHub, VS Code, Postman, Netlify

PROJECTS

Personal Portfolio Website mayank-sharma03.netlify.app

- Designed and built a fully responsive personal portfolio using semantic HTML, custom CSS layouts, and interactive JavaScript, deployed live on Netlify.
- Built dynamic sections for skills and education, plus a fully functional asynchronous contact form.

K8s Store Factory github.com/sharmamayank5769-ctrl

A multi-tenant store provisioning platform — users sign up, log in, and launch isolated stores through a dashboard backed by a real REST API and database.

- **Frontend:** Built the full UI in HTML, CSS, and JavaScript — login/signup flow, a dashboard that renders store cards dynamically via DOM manipulation (forEach, createElement, appendChild), and a store-creation form with auto-generated passwords and live storage-size calculation.
- **Backend:** Built a Flask REST API in an MVC pattern (separate controller/model layers) with SQLite for persistence; implemented full CRUD endpoints for users and stores using parameterized queries to prevent SQL injection.
- **Auth & Security:** Implemented JWT-based authentication with PyJWT (signed, time-expiring tokens) and bcrypt password hashing; protected sensitive routes with a custom token-verification decorator.
- **Integration:** Connected frontend to backend end-to-end via the Fetch API with CORS enabled — login, signup, store listing, creation, and deletion all operate on real data, with tokens persisted in localStorage.
- **In Progress:** Containerizing the app with Docker and deploying on Kubernetes (Kind locally, K3s in production) with per-tenant namespace isolation and Helm-based deployment.
- **Stack:** HTML/CSS/JS, Flask, SQLite, PyJWT, bcrypt, Git, Docker, Kubernetes (in progress)

EDUCATION

Bachelor of Technology, Information Technology | Aug 2024 – 2028 (Expected)

Institute of Technology & Management, Aligarh — 3rd Year, 5th Semester

Coursework: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Senior Secondary (XII), Science with CS | 2023 – 2024

Gagan Public School, Aligarh

CERTIFICATIONS

- Introduction to Generative AI — Art of the Possible, AWS Training Online (June 2025)
- Python Fundamentals, Simplilearn
- Google Arcade Facilitator Program — cloud computing challenges via Google Cloud Skills Boost
